

IDEATION PHASE

Brainstorm & Idea Prioritization

Date	18 June 2026
Student Name	Turlapati Lahari (24eg109a54@anurag.edu.in)
Team ID	
Project Name	ShopEz
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

The ideation process offers a methodical yet imaginative framework for defining software specifications and creating architectural blueprints. This stage focuses on identifying and ranking high-value capabilities for the ShopEz MERN ecosystem, balancing innovation with practical technical constraints.

Step-1: Selection of the Problem Statement

Problem Identification: Today's online shoppers expect a seamless, rapid, and highly secure shopping journey across all their devices. Current platforms frequently suffer from fragmented administrative tools or lack transparent, real-time logistics tracking within a consolidated technology stack.

Selected Problem Statement: "In what way can we develop a comprehensive MERN-based application that ensures a smooth, intuitive transition from product discovery to final checkout for consumers, while simultaneously providing a robust and secure oversight portal for management?"

Step-2: Brainstorm, Idea Listing and Grouping

Classification of primary concepts derived from the individual ideation workshop:

User Interface (Frontend)

- React-powered dynamic inventory display
- Fluid UI layouts for various age/ gender categories
- Advanced search filters and navigation tools
- State management via Redux for cart persistence

Backend & Logic

- Secure token-based user verification (JWT)
- RESTful API built on Express.js foundations
- Automated order tracking and history retrieval
- Instantaneous stock level synchronization

Database (MongoDB)

- Efficiently structured data models for users/items
- Optimized indexing by category for rapid queries
- Cloud-based visual asset management (Cloudinary)

Admin Features

- Authenticated management control panel
- Full lifecycle management of product listings
- Systematized workflow for order completion

Step-3: Idea Prioritization

Assessment of project modules based on Criticality vs. Implementation Difficulty to define the MVP trajectory.

Feature Category	Importance (High/Med)	Feasibility (High/Med)	Priority Level
MERN Core & Database Integration	High	High	Critical (Phase 1)
Security & User Access Roles	High	High	Critical (Phase 1)
Administrative Management Tools	High	Medium	High (Phase 2)
Product Filtering & Navigation	Medium	High	Standard (Phase 2)
Live Order Progress Tracking	Medium	Medium	Secondary (Phase 3)
